Anyone able to list the user story IDs that were worked on this sprint, including the extra ones that are being worked on that were not on the planning sheet

Derren Wei Hong Chin 10:14 AM

its still the same as the sprint planning

but if you want to the sub-tasks, refer to Jira

Liam Carnie 10:15 AM

Thought so, was just checking if any extra IDs were handled

For who's doing the home page: it is the Dashboard.js, you can transfer the code to Dashboard if u have previously create another file.

Liam Carnie 2:47 PM

Is there a meeting tonight?

Derren Wei Hong Chin 2:47 PM

No

Liam Carnie 2:47 PM

Alright

@everyone CI is set for our repo. From now, for branches that didn't have .circleci file will fail the run (it's ok cuz I havent set this criteria yet). Just keep doing ur work guys. Once u r done, try to 'git pull origin setup' to apply .circleci folder to your branch. Not sure how? I will help u guys out if there's any problem (edited)

Khoi Nguyen 🙌 8:40 PM

Link to join CircleCI: <https://app.circleci.com/pipelines/github/s3678755/SEPT-Tue-1830-Group-01?invite=true>

Khoi Nguyen 🙌 10:45 PM

Just introduced this 2 more dependencies: material icons and material-search-bar. Try to rerun 'npm install' once u pull from this branch to get all of the required dependencies

image.png ▾

```
@material-ui/core: ^4.11.2,  
"@material-ui/icons": "^4.11.2",  
"@testing-library/jest-dom": "^4.2.4",  
"@testing-library/react": "^9.5.0",
```

Alrighty, i added somethings from jira that looked like that they weren't noted on the plan for sprint 1, so wrote those into sprint 2

Khoi Nguyen 🙌 3:59 PM

will get a proper list of work done for u on Friday meeting, I'm currently busy doing another assignment plus the docker ci stuff

Liam Carnie 4:21 PM

yeah its no rush, everyone is quite busy at the moment

Khoi Nguyen 🙌 6:21 PM

@everyone I have finished setting up MySQL for our application (merged). From now, we r not using H2 DB for storing anymore, therefore the usage now is a little different as u need to have mysql start in the background first. As you have done the Docker take home assignment, I am using Docker MySQL image to speed up the process of creating a DB. I want to take the next weekly meeting to talk/discuss/explain about the current application architecture and future plans with u guys and help you with the MySQL docker image setup. Our current main branch have changed from setup to master, just to follow the convention when marking. [@Chen Wang](#) and [@Sarthak Rungta](#) please send up your branch with current testing work (Sarthak already have some of it on master already), we'll merge everything together then I and [@Derren Wei Hong Chin](#) [@Liam Carnie](#) will do the document for submission (edited)

For now, I need you guys to have these application installed to continue to run the app properly:

- MySQL Workbench
- WSL to run Docker
- Docker Desktop

I know u guys have the assignment yesterday about docker but yea, just to leave the note here if anyone needs

For Frontend: Hey guys, I just mad Sunday, August 22nd ▾ form Homy gave us:

- Turned the form to Formik form and applied custome styling particularly for Register.js submit button (file named Register.css in the same folder Register).
- This is the sample I made for you guys to show the styling convention
- We use this for others to see and easily navigate individual component styling by just ctr+F the className in the .js file and find it in the .css for transparent and layer free while styling.
- All the work is in **be-login-signup** branch. Reach me if you have a question

(edited)

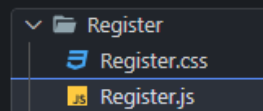

I will continue to work on this login and signup form and connect back and front. For now, it's the concept, please have a look and apply this styling convention in ur work as well

Khoi Nguyen 🐧 8:04 PM

How it should look (edited)

Khoi Nguyen 🐧 9:00 PM

also Figma for about us and contact page is now available

Derren Wei Hong Chin 10:33 PM

Will look into it

[@Khoi Nguyen](#) [@Derren Wei Hong Chin](#) I am branching off from setup to create 'about us' page. Also, there is some confusion I have about the homepage branch and some changes. I request Khoi to text me when he sees this message

Also, Thankyou so much [@Khoi Nguyen](#) for Formik. Its such a cool tool to work with!!

Khoi Nguyen 🐧 12:27 PM

hmm just think of a way to separate the CSS for individual component [@Sarathak Rungta](#): use only className with this convention: `.{page_name}-{class_name}` (e.g. `aboutUs--quote`)
